

Centriq Remote Instructor-Led Training

Remote Instructor-Led Training (Remote-ILT) is a learning solution that blends traditional classroom instruction with leading conferencing and collaboration technologies allowing IT professionals to get the training they want when they need it.

Our Remote-ILT program was designed from inception to provide both the benefits of traditional instructor-led classroom training and a classroom learning experience brought to you in the convenience of your own office, home or remote location. We'll seat you virtually in a real-life class taught by one of our expert instructors. With this option, you can attend the training you need, when you need it, in the environment that is most comfortable for you to be successful.

Remote-ILT students are able to:

- Participate in the live instructor-led classroom demonstrations and labs
- Interact with the instructor and students, via high-quality conferencing equipment
- View the Instructor's presentation, whiteboard and demonstrations
- Get remote hands-on help from the instructor during labs and demos
- Learn in an interruption free classroom environment

The Centriq Remote-ILT Setting

You can attend a Centriq Remote-ILT class at:

- Your home
- Your office or place of business
- Anywhere a broadband connection is available

If you would like to attend one of our Remote-ILT classes (denoted on our [Course Calendar](#) by the "globe" symbol), please fill out the [Connectivity Test](#) here to see if your setting meets the Technical Requirements.

What to Expect in a Centriq Remote-ILT Class

You will be able to:

- **View the Instructor's Presentation**
Using Web conferencing, you can see the instructor's desktop as he or she steps you through demonstrations or displays PowerPoint presentations.
- **Listen and Participate**
Because you'll be using a VOIP headset (provided with your book), you can listen to the instructor and participate just as in a regular class.
- **View the Instructor's Whiteboard**
A special capture device transmits everything on the whiteboard so you can follow along as the instructor illustrates concepts.
- **Get Help from the Instructor**
Remote desktop software enables the instructor to access your computer and view your desktop. Should you need it, the instructor can take control of your computer (the computer you're remoting into inside the classroom) during the class to provide help.
